What is the SIRN 20/20 study?

A study spearheaded by the Statewide Interoperability Executive Committee (SIEC) to build consensus and determine the feasibility of an interoperable public safety radio solution for first responders across the State of North Dakota

- Frame a fiscally responsible solution for implementing statewide, interoperable, radio communications
- Define and establish a representative governing organization that considers and incorporates the views of all stakeholders as appropriate
- Provide a model that enables all stakeholders to gain and maintain access to resources, training, and

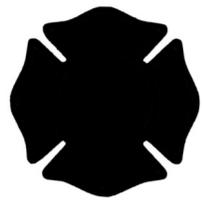

“...130 law enforcement agencies, 175 public and private EMS departments, 22 dispatch centers, and nearly 400 fire departments, operational across 53 counties, Tribal nations, and the State...”

ND Statewide Radio Systems Assessment and Evolution Study, 2014
